MRI AND CONSULTATION REPORT

Patient: Christopher M. Morris
DOB: 03/14/1977
Date of Service: August 12, 2024
Referring: Patricia Strand, MD
Physician: Robert Chen, MD, Orthopedic Surgery
Exam: MRI Right Knee without contrast

FINDINGS

Oblique tear of the posterior horn of the medial meniscus, partial thickness.
Mild joint effusion. No bone marrow edema. Cruciate and collateral ligaments intact.
Articular cartilage preserved. No loose bodies.

IMPRESSION AND PLAN

Chronic partial tear, right medial meniscus, after a trail stumble.
Conservative management. Completed physical therapy course. Hinged brace for activity.
OTC naproxen as needed. Avoid prolonged stair use and long static sitting.
Follow up as needed. Surgery not indicated at this time.

Recommended interval re-evaluation scheduled for December 22, 2026 to assess ongoing stiffness.
